

Knowledge platform for topics related to image processing with 2D, 3D and AI

IDS Vision Channel – Platform for digital live sessions and networking

"Knowledge increases when it is shared" – following this maxim, IDS is making its expertise as one of the leading manufacturers of digital industrial cameras free of charge and directly accessible on a new platform. In addition to online events, useful tools such as calendars and live chats, the IDS Vision Channel also offers a media library with recordings of past events and additional, exclusive content. The online sessions address image processing topics around 2D, 3D and embedded vision as well as artificial intelligence. They are short, focused and build on each other depending on the topic. This makes them interesting for both beginners and experts. Afterwards, questions can be discussed in the group or with the speakers. This makes the IDS Vision Channel ideal for knowledge exchange and knowledge building.

The speakers are from a wide range of disciplines at IDS, from product management to development to management. In addition there will be guests – such as the IDS Solution Partners or start-ups – depending on the subject. The experts are available to answer questions during and after the online sessions. Each event will be offered at least twice so that people from every time zone can participate live. The channel language is English. An overview of all upcoming dates can be found in the IDS Vision Channel calendar, which allows the various events to be easily filtered, booked and managed.

"We bring our specialists to you – conveniently on the screen. Participants can choose suitable events from a wide range of topics and receive tips and tricks for their own applications," summarises IDS Managing Director Jan Hartmann. As travel restrictions continue due to the pandemic, the IDS Vision Channel is intended to serve as a digital meeting place and to foster exchange within the international machine vision community. Registration is open and free of charge via www.ids-vision-channel.tech.

About IDS Imaging Development Systems GmbH:

The industrial camera manufacturer IDS Imaging Development Systems GmbH develops high-performance, easy-to-use USB, GigE and 3D cameras with a wide spectrum of sensors and variants. The almost unlimited range of applications covers multiple non-industrial and industrial sectors in the field of equipment, plant and mechanical engineering. In addition to the successful CMOS cameras, the company expands its portfolio with vision app-based, intelligent cameras. The novel image processing platform IDS NXT is freely programmable and extremely versatile.

Since its foundation in 1997 as a two-man company, IDS has developed into an independent, ISO-certified family business with more than 330 employees. The headquarters in Obersulm, Germany, is both a development and production site. With branches in the USA, Japan, South Korea and UK as well as other offices, IDS is represented internationally.
